Dosage

200 mg tablet daily for the first 14 days followed by 200 mg tablet twice daily in combination with at least 2 additional antiretroviral agents, to which the patient has not been previously exposed.

Indications

For use in combination with other antiretroviral agents for the treatment of HIV-1 infection in adults and children > 50 kg.

Where it’s positioned

The S.A. HIV Clinicians Society recommend nevirapine use for a specific clinical reason. For example, as an alternative in patients with contraindications for efavirenz (e.g. psychosis). (1)
